| Disorder Results(8 of 18) |      |                                                                                                                                                                    |
|---------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CDDY                      | N/C  | At Risk: Dog has one copy of the CDDY mutation. Dog is at risk for IVDD and may pass the mutation to offspring.                                                    |
| CDPA                      | N/N  | Clear: Dog is negative for the CDPA mutation.                                                                                                                      |
| CKCSID                    | n/n  | Clear: Dog is negative for mutation associated with Curly Coat Dry Eye.                                                                                            |
| DM                        | n/DM | Heterozygous: Dog carries one copy of the mutation associated with Degenerative Myelopathy. In some breeds, there is a low risk of the dog developing the disorder |
| EFS                       | n/n  | Clear: Dog is negative for mutation associated with Episodic Falling.                                                                                              |
| NEwS                      | n/n  | Clear: Dog is negative for mutation associated with NEwS.                                                                                                          |
| PRA-prcd                  | n/P  | Carrier: Dog is a carrier of the PRA-prcd mutation. Dog will not be affected by PRA-prcd but may pass the mutation to offspring.                                   |
| vWD1                      | n/n  | Clear: Dog is negative for the mutation associated with von Willebrand's Disease Type I.                                                                           |

## Genetic Testing Report

Meadow

### Color Results(5 of 18)

|                            |              |                                                                                                  |
|----------------------------|--------------|--------------------------------------------------------------------------------------------------|
| A-Locus                    | <b>at/at</b> | Dog has two copies of the gene causing tan points.                                               |
| B-Locus                    | <b>B/B</b>   | Dog does not carry the mutation for most forms of chocolate coloration.                          |
| D-Locus                    | <b>D/D</b>   | Negative: Dog is negative for the mutation associated with a diluted coat color.                 |
| E-Locus (E, EM, eA, eW, e) | <b>e/e</b>   | Dog has two copies of cream/yellow.                                                              |
| K-Locus                    | <b>n/n</b>   | Dog is negative for the KB allele, and the coat coloration will be based on the agouti genotype. |

### Pattern Results(1 of 18)

|         |            |                                                                                                                              |
|---------|------------|------------------------------------------------------------------------------------------------------------------------------|
| S-Locus | <b>n/S</b> | Heterozygous: Dog has one copy of S-Locus. Results vary according to breed, with some limited white spotting in some breeds. |
|---------|------------|------------------------------------------------------------------------------------------------------------------------------|

### Trait Results(4 of 18)

|                   |                                    |                                                                                                                                                  |
|-------------------|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Curl 1&2          | <b>n/C<sup>1</sup></b>             | The dog will have curly hair, and carries the gene responsible for non-curly hair. The dog can pass on a copy of either allele to any offspring. |
| Furnishings       | <b>n/F</b>                         | Furnished: Dog has one copy of the furnishings mutation and will be visibly furnished. The furnishings mutation may be passed to offspring.      |
| Hair Length (1-5) | <b>l<sup>1</sup>/l<sup>1</sup></b> | Two copies of the long-hair allele, dog will have longer than average hair per the breed standard.                                               |
| Shedding          | <b>n/SD</b>                        | Dog carries one copy of the shedding allele. The dog will have an average propensity towards shedding.                                           |
